

C1
C1

a top coupled with said second end of said sidewall section, said top forming an opening sized for receiving a fish, said top having an upper surface projecting inwardly from said sidewall section to cover a portion of said interior compartment;

a baffle coupled with said sidewall section having first and second surfaces, said first surface extending generally horizontally from said sidewall section inwardly into said interior compartment, said second surface extending outwardly toward said sidewall section to form an upper section of said interior compartment between said baffle and said top; and

an overflow drain coupled with said sidewall section of said tank between said top and said baffle whereby said upper section is capable of retaining water near said top of said compartment regardless of the movement of the boat so that sloshing within the compartment is minimized.

C2

7. (Twice Amended) The livewell tank of claim 1, wherein said first surface is generally planar and said second surface is curved.

12. (Twice Amended) A livewell tank for use on a boat to hold fish, said tank comprising:

C3

a bottom;

a sidewall section having first and second opposing ends, said sidewall section coupled with and upstanding from said bottom at said first end to define an interior compartment;
